

We're Big Fans of Clean Air

SmartWind™ is an extension of our commitment to protecting the environment while meeting our customers' need for a reliable and affordable supply of electricity. We know that well-planned programs like SmartWind™ not only benefit the environment, they make good business sense, too.

About SmartWind™

SmartWind™ is an electricity product generated from renewable energy resources. SmartWind™ is produced in Pennsylvania by wind farms contracted to FirstEnergy Solutions Corp.

Your purchase of SmartWind™ allows you to support wind technology for creating electricity. Wind, as a renewable resource, is continuously replenished by nature and reduces environmental impacts.

By choosing SmartWind™, you also support the future development of cleaner forms of electric generation.

You Choose Your Blend

Unlike other wind products, SmartWind™ isn't made up of specific products with set percentages of wind. You can choose the percentage that meets your renewable energy goals or the overall electric generation price that meets your budget.

All Wind Is Not Equal

Many companies sell Renewable Energy Credits (RECs) from wind generation based in Nebraska, Oklahoma and North Dakota. Although this supports renewable technology, the electricity and clean air benefits stay in those areas. SmartWind™ directly benefits the Mid-Atlantic region with cleaner air.

Wind Power Projects

- Meyersdale – 30 MW – Active since 2003
- Allegheny Ridge I – 80 MW – Expected Online October 2007
- Allegheny Ridge II – 70 MW – Expected Online December 2007
- Casselman – 34.5 MW – Expected Online December 2007
